### ■ SWITZERLAND

## Screenchanger delivery

**MAAG** ■ The company recently delivered innovative screen changer filter design technology for world's largest PET production line based on *Uhde Inventa-Fischer's MTR* (Melt-to-Resin) process.

The main challenge faced today by PET manufacturers and operating companies alike is the sourcing of screen chang-

ers combining both the smallest footprint and the largest filtration surface in one single package. *Maag* has developed tailor-made filtration units in close co-operation with *Uhde Inventa-Fischer* for an expansion project at a major facility in the Middle-East.

## New generation of pouch-making machinery

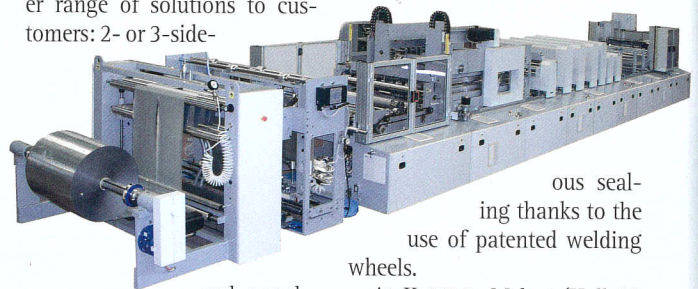

**MOBERT** ■ The innovative manufacturer from Castellanza (VA) recently introduced *MPP 800 SUP*, a new generation pouch-making machine designed for different application in the flexible packaging industry: food, non-food, pet-food, medical and pharmaceuticals.

In 2012, the company has acquired new know-how in the field of pouch-making machines for laminated film. All equipments have been updated and are engineered and manufactured in Italy according to the highest quality standards. *Mobert* now offers an even wider range of solutions to customers: 2- or 3-side-

tion of bags focused on medical and pharmaceutical industry complete the wide range of new lines such as medical lin-

ear for the production of chevron pouches (flat and gusseted) 3-side seal pouches and header bags, medical roto for the production of bags on rolls (flat and gusseted) with continu-

ous sealing thanks to the use of patented welding wheels. seal pouches, stand-up pouches with bottom folded or inserted, zipper pouches, vacuum bags, shaped or retorted pouches, security bags with adhesive tape, bags with valves (coffee bags up to 5 kg (11 lbs) and bag-in-box for liquids up to 20 litre), bag focused on pet-food market (side gusset bags with pinch bottom and hotmelt applicator up to 25 kg/55 lbs), tailor-made solutions on request. Furthermore, machines for the produc-

ous sealing thanks to the use of patented welding wheels.

At K 2013, *Mobert* (Hall 03 stand E16) also presents the *Nastrosac 4M*, machine designed for the production on Single track of bottom welded draw-type bags and normal bottom welded bags. Also on display will be the *Roller SHP 2M-AUT*, a machine designed for the production on multiple tracks of pre-cut bottom welded bags and T-shirt bags to tear-off (bags on roll) on carton core.
